OLUSANYA TIMOTHY

Software & AI Engineer

Lagos, Nigeria | olusanyatimothy54@gmail.com | +234 812 786 8211 | olusanyatimothy.dev
github.com/olusanyatimothy | linkedin.com/in/olusanyatimothy

Software & AI engineer with 8+ years building reliable, secure systems end to end. I specialize in backend architecture and system design, ship polished full-stack products, and harden AI systems through adversarial testing and red teaming. I help startups and enterprises turn complex problems into simple, performant software.

CORE COMPETENCIES

Languages: TypeScript, JavaScript, Go, Python, SQL
Backend & Infra: Node.js, FastAPI, PostgreSQL, Redis, Kafka, Docker, Kubernetes, AWS
Frontend: React, Next.js, Tailwind CSS, accessible component systems
AI / Security: ML pipelines, anomaly detection, AI red teaming, threat modeling, OWASP
Practices: System design, API design (REST/GraphQL/gRPC), CI/CD, observability, TDD

SELECTED EXPERIENCE

Software & AI Engineer — Independent / Contract

2019 – Present | Lagos, Nigeria (remote-friendly)

- Designed and built a multi-entity finance platform on a double-entry, event-sourced ledger; cut month-end close by ~60% with zero balance discrepancies across 12 entities.
- Built a high-throughput crypto trading backend in Go (matching engine, wallet controls, multi-sig approvals); sustained 10k matched orders/min at <50ms latency with 99.99% uptime.
- Delivered an ML-powered analytics platform (Kafka + scikit-learn) detecting anomalies across 5M+ events/day at 94% precision, reducing manual review effort by ~80%.
- Performed AI red teaming and threat modeling on AI-powered features, surfacing and mitigating prompt-injection and abuse risks pre-launch; external pentests closed with no critical findings.
- Rebuilt headless e-commerce and mobile banking frontends, lifting conversion +32% and core task completion to 92% through performance and UX work.

Senior Backend Engineer — Northwind Systems

2018 – 2019 | Lagos, Nigeria

- Owned core REST/GraphQL services and the release pipeline; reduced p95 API latency by ~40% via caching, query optimization, and connection pooling.
- Introduced contract testing and structured code review, cutting production regressions and enabling parallel frontend/backend delivery.
- Mentored two junior engineers and led the migration of a monolith module to independently deployable services.

Software Engineer — BrightPath Labs

2016 – 2018 | Lagos, Nigeria

- Shipped customer-facing features across the stack (React + Node + PostgreSQL) on two-week iteration cycles.
- Built internal tooling that automated manual reporting, saving the operations team several hours per week.

SELECTED PROJECTS

- Fincash — all-in-one fintech mobile app (React Native): unified dashboard + instant payments; 4× faster key actions, ~60% less navigation time.
- LandSecure — PropTech platform (Next.js + Solidity): on-chain document stamping, escrow, GIS mapping; verification cut to under 72 hours.
- CloudMetrics — real-time analytics dashboard with a typed component library; +45% daily active usage, 2× feature velocity.

EDUCATION

B.Sc. Computer Science

University of Lagos | 2012 – 2016

FOCUS AREAS & CONTINUOUS LEARNING

AI safety and red teaming, distributed systems and event-driven architecture, application security (OWASP Top 10, threat modeling), and platform reliability / SRE practices.
